MACHINERYROW

in the packaging equipment industry.

Almeida Martins is a Brazilian-based company founded in 1993 and dedicated to helping companies with material handling as well as robotic solutions for packaging and palletizing. Almeida Martins' advanced technologies and machine capabilities are now used by more than 800 companies in Brazil.

The acquisition will considerably improve Premier Tech Chronos' ability to better serve global accounts in Brazil and reinforces its brand recognition in this strategic market. Visit ptchronos.com.

Serra Sawmill Is Peru Friendly

SERRA reports it assisted one customer with training on a recently installed SERRA Sawmill Africa XE160 near the Utuquinia River in Peru. The customer saws the hardwood, Shihuahuaco, with diameters of 1.6 m. Serra officials says the machine has such capacity that two edgers and two crosscut saws could not keep up with the SERRA production pace.

SERRA also started up a Sawmill Africa XE160 in the city of Pucallpa for a customer who produces pallets for several industries. People were impressed by the accuracy, cutting quality and output of the machine.

The company reports it has installed the SERRA Sawmill in 75 countries.

Sweden Sawmill Has Edge With New Bearings

By using Timken spherical roller bearing solid-block housed units, the Swedish company Derome Timber AB increased cost efficiency and productivity in one of its sawmills.

Derome experienced challenges keeping the chain conveyor up and running at a sawmill in Veddige, on the west coast of Sweden. The conveyor system is part of equipment that rotates the logs for further processing. The heavy logs fall from a height of 50 cm onto the conveyor belt, causing severe shock loads upon impact.
